IMPORTANT

IN this, our Annual Catalog of Bulbs, Seeds, etc., for Fall Planting, customers and friends will find an assortment of choice products worthy of especial consideration.

Bulbs may be grown indoors in the winter months, when flowers are most appreciated. By successive plantings a constant supply of blooms can be had from December until May. The finest outdoor displays of the early Spring months are also from bulbs planted outdoors in the Autumn. The cultural directions found under the respective headings are worthy of careful attention.

Our bulbs are all **SELECTED FIRST SIZE TOP ROOTS**, coming from the best growers, and should not be confounded with the cheap "case" bulbs sent to this country on speculation, and often sold at auction and otherwise, at very low prices.

ORDERS should be sent as soon as possible after receipt of this catalogue. The bulbs will be shipped in proper time for planting. They are ready from August to November, according to the time of ripening and the country from which they come. Orders received earliest are sure of being filled in full. If left too late, the supply of some of the varieties may be exhausted.

Prices, as will be seen upon comparison with others, are as low as Highest Grade Bulbs can be sold and **DO NOT INCLUDE TRANSPORTATION.**

CONDITIONS OF SALE. As we have no control over the way our customers plant and care for their bulbs, the climate, soil and other conditions, we cannot guarantee the crop. We give no warranty, expressed or implied, as to description, growth, purity, productiveness, or any other matter connected with any seeds, bulbs or plants, etc., we send out, and will not in any way be responsible for the crop. All seeds and other goods are supplied only on these conditions.

Remittances may be made by P. O. Money Order, Express M. O. or Bank Draft. Cash or stamps should be sent in a registered letter, otherwise it is at the sender's risk.

C. O. D. Orders cost the customers extra for returning the money, so we advise against ordering this way, but will send C. O. D. where the request is accompanied by 25 per cent of the amount of your order.

PRICES. All prices subject to change without notice.

IMPORTANT. Write your name and address plainly, or better still, print it, but please do not write anything else on the order. Any questions, remarks or letter should be on separate sheet of paper. Keep a copy of your order, and if you do not hear from us in a reasonable time, send

a duplicate order, naming the date on which the former order was sent, the amount of money enclosed, and in what form. Do not write until you have allowed a reasonable time for your order to reach you.

THORBURN'S BULBS

HYACINTHS

THE HYACINTH is one of the most popular and beautiful Spring flowering plants for indoor and outdoor decoration. By careful management in keeping up a succession, it may be had in flower from the beginning of winter to the end of May. For a spring display in the open ground it is unexcelled. Brilliant effects can be obtained by massing different colors in varieties that grow about the same height, and bloom at the same time.

OUTSIDE CULTURE. In this section, October is the month to plant Hyacinths outside, but they may be planted anytime before the ground freezes up. They succeed best in a light soil and a sunny situation. If the soil is naturally heavy, some sand should be mixed with it, and if the beds have been occupied with other plants throughout the summer, some well-rotted cow manure should be added. The soil should be well dug to a depth of 14 inches, and raised from 2 to 4 inches above the level of the walk. The bulbs should be planted evenly, about 6 inches deep to the bottom of the bulb, and from 6 to 7 inches apart; if planted at uneven depths they will not bloom at the same time, but irregularly.

Care must be taken not to press the earth too firmly around and over the bulbs. Some successful gardeners follow the plan of setting each bulb in a handful of clean sand, which insures proper drainage. After the ground has been frozen in early winter, cover with a few inches of dry litter evergreen boughs or coarse manure. If this cover-

ing be applied before freezing weather, it renders the bulbs liable to the predations of field mice which may burrow into it.

CULTURE IN POTS. For growing in pots, large, selected, named varieties should be used. They should be potted singly in 5-inch or 6-inch pots. Three bulbs in a 7-inch pot are very effective. The best potting compost is fibrous loam and manure in about equal parts, with some river sand intermixed. The pots should be filled lightly, and the bulb pressed into the soil so that its base is firmly fixed. About one-third of the bulb should remain above the soil. The pots should then be buried in the open ground to the depth of 6 inches or placed in a dark cool cellar, and left there for five or six weeks, until they are well filled with roots. They may then be taken into the house where the warmth will soon bring them into flower. Where succession is desired, it is best to pot at intervals from September to the end of November. Plenty of water should be applied, and manure-water is beneficial after the flower-spikes appear.

CULTURE IN GLASSES. Single varieties are better adapted for culture in glasses than double ones. The bulb should be placed so that the base is just in contact with the water. Soft rainwater should be used, and a little charcoal might be placed in it to keep it pure. The glasses should be kept in a cool, dark closet for ten or twelve days, until roots are formed, and then exposed to the light and air as much as possible. Do not place them near gaslight. In very cold weather the glasses should be removed from the window, as the bulbs cannot stand frost. The water should never be allowed to freeze, and it should be changed every two or three days.

Customers unacquainted with the different varieties will do well to leave the selection to us, only specifying in their order whether bulbs are wanted for pot, glass or garden culture.

NAMED EXHIBITION HYACINTHS

N. B. Our Select Named Hyacinths are the cream of the Holland nurseries—and are called top-roots—under their original names. For forcing in pots or for outdoor beds they far surpass the class of Bulbs usually sold.

The single-flowered varieties are generally more effective and better for forcing than the double ones. They also, as a rule, succeed better in glasses.

Price of all single named Dutch Hyacinths, 20 cents each, \$2.00 per dozen, \$15.00 per hundred; not less than six of one kind sold at dozen rates, nor fifty of a kind at hundred rates.

If wanted by mail add postage at zone rates; weight three pounds per dozen, twenty-five pounds per hundred. Single bulbs mailed free.

Various Types of Tulips

TULIPS

It to be sent by mail, add postage at zone rates

For beauty of form and brilliancy of coloring, tulips are unequaled. For bedding they are the most popular and effective of all hardy bulbous plants. In order to assist our customers in selecting varieties of tulips for beds in borders, etc., we give herewith a list of the most popular varieties, in Early and Late sorts. The height of stem is indicated as "tall" and "medium."

CULTURE. The cultural directions given for hyacinths, on page three, are equally applicable to tulips, except that the bulbs, being smaller, must not be planted quite so deep. Four inches to the bottom of the bulb is deep enough, and a distance of five or six inches between the bulbs is sufficient. A little sand around each bulb is generally recommended, but in light, sandy soil this may be dispensed with. To obtain the best results it is desirable that they should not be planted in ground where tulips were grown the previous year. We recommend **early planting** so that the bulbs may obtain a good root growth before the frost sets in, but they may be planted with good results any time before the ground freezes. For pot culture, a compost of two parts loam to one part light manure, with some sand intermixed, is suitable. From three to five bulbs, according to size, in a 5-inch pot, are very effective. The pots should be buried until the bulbs are well rooted, in the manner recommended for hyacinths. Most of the varieties named below are equally well adapted for pot culture or the open ground.

SINGLE EARLY TULIPS

For our customers' guidance when making a selection of Tulips, we have numbered each variety in their order of flowering (No. 1 blooming first), so that by a careful selection a nice succession of blooms may be obtained, or, on the other hand, a grand display may be ensured by choosing only those varieties with the same number. All varieties marked with * are recommended for forcing.

If by parcel post add postage at zone rates; weight 7 lb. per 100.

NARCISSUS

The Daffodils of the Poets

Narcissus are among the most popular and largely grown of spring-flowering bulbs, and deservedly, too. Their exquisite grace, beauty and charm of habit have been immortalized in the poetry of all times. No garden should be without them.

For growing in pots they require about the same treatment as hyacinths, three or four bulbs in a 5-inch pot. Some of the varieties are grown in large numbers by florists for winter cut-flowers. With the exception of the Polyanthus section, they are all perfectly hardy.
